Hiring Software Expert - Programming

SCOPE

Our .NET developers will be responsible for building .NET applications using C#.NET focusing on the full stack – front end, business logic, and back end. Primary responsibility will be to design and develop these layers of our applications, and to coordinate with the rest of the team working on different layers of the infrastructure. A commitment to collaborative problem solving, sophisticated design, and quality product is essential.

What You Will Do

•Solve problems by crafting software solutions using maintainable and modular code that you would be proud to show to colleagues (which you will for code reviews).

•We want to hire engineers, not language specialists. Therefore, we're more focused on where you stand on programming fundamentals, including common data types, design patterns, object-oriented design principals, experience with unit testing, modern version control flows(Git).

•Participate in daily team standup meetings where you'll give and receive updates on the current backlog and challenges.

•Participate in code reviews.

•Write unit, functional, acceptance, and/or user tests.

•Challenge your fellow team members to grow and enhance our team with new, diverse talent.

SKILLS / REQUIREMENT

•Full stack role with emphasis on C#, MVC (.Net Core 2), Web API, RESTful

•Familiar with various design and architectural patterns.

•Knack for writing clean, readable, and easily maintainable code.

•Understanding of fundamental design principles for building a scalable application.

•Experience implementing unit tests like NUnit or XUnit.

•Knowledge of OOP, Design Patterns, Dependency Injection Framework such as Autofac etc.

Desired:

•Experience with Microservices, DDD (Domain Driven Design).

•Experience in an Agile delivery environment.

•Proficient understanding of code versioning tools such as Git.
