About the Company

ASA has been founded in 2012 by three partners, an "A" grade financial market broker ("Agah" brokerage firm) and two other IT based firms with strong background in banking and tourism technology.

The founders put all their financial and technical efforts for ASA to become a full service Fin-Tech company with more than 45 staff members developing a wide variation of solutions for financial markets.

ASA, as a fully licensed firm (by TSE), provides a wide range of integrated stock market services to Agah Clients. We started by providing an automated data delivery and analysis framework which makes clients trades more efficient. Eventually the solution will turn into a trade signal generator facilitating portfolio or wealth management processes.

On the trade side, ASA provides an agile, safe and reliable trading multi-platform (Web, IOS and android) which carries out client's orders as well as post trade services.

We believe that an integrated social network community will improve the exchange of information between clients. Building on that, our "CRM" and "Bashghah" (customer club) services allows the broker and clients to communicate more efficiently resulting in a better understanding of their true demands.
